

Metalworking has been a Kennametal expertise for 70 years. Kennametal never stops inventing, designing, testing, and manufacturing the world's best metal working tools. From milling to turning to hole-making, Kennametal provides the industry's best metalworking tools using advanced tungsten carbide, ceramics, and high-speed steel materials.

Kennametal indexable milling solutions are engineered, designed, and focused for specific markets, applications, and industries.

No matter what type of work-piece you're milling, Kennametal solid end mills will boost your productivity.

Kennametal turning innovations deliver optimum output in all turning, grooving, threading, boring, and cut-off applications. See our complete line of inserts in high-performance grades and coatings, and versatile tool-holders.

Kennametal offers the most comprehensive line of hole-making products ranging from micro solid carbide drills to indexable drills, to fine boring systems, to general purpose HSS drills and QPV blades.

As the exclusive Kennametal Channel Partner for New York State, we offer superior pricing, access to the complete line and direct deliveries from factory stock. Being a Channel Partner allows us full access to Kennametal's Application Engineers. They can help you improve your processes to save time and money.

“Let H&C Tool Supply help you cut a new path to productivity and profitability!”
