

**“H&C Tool Supply is proud to be a Premier Distributor of Master Chemical  
Lubricants, coolants and cleaners”**

**master CHEMICAL CORPORATION**

For more than **60 years** Master Chemical has lead the industry with **TRIM®** metalworking fluids for all types of cutting and grinding operations. Known worldwide for superior performance, TRIM meets the demands of specialized industries such as automotive, aerospace, and medical parts manufacturers.

Master Chemical’s **TRIM SOL®** is a soluble oil (emulsion) coolant concentrate which is the world standard general-purpose multi-metal coolant for general machining of ferrous and nonferrous materials. It has the lubricity and “guts” necessary to do heavy-duty machining center work and still provide the wetting and cooling necessary for high-speed turning and grinding operations.

Master Chemical’s **TRIM® VHP® E200PW** is a chemical emulsion (soluble oil) coolant that specializes in heavy-duty machining and creepfeed grinding of aircraft alloys. Pratt & Whitney has approved this product for use on all materials.

**TRIM® E206** is a soluble oil (emulsion) coolant that performs extremely well in a wide range of machining operations on ferrous and nonferrous materials. It has the lubricity and “guts” necessary to do heavy-duty machining center work and still provide the wetting and cooling necessary to do high-speed turning and grinding operations.

The **Yellow Bellied Sump Sucker™** will clean virtually any machine tool sump quickly and thoroughly. During the process of cleaning the machine, the sump cleaner also:

- Removes the coolant, sludge and chips from the sump
- Filters the sludge and chips from the coolant
- Returns the filtered coolant to the sump, or transports the coolant to waste treatment for disposal or to a Master Chemical **XYBEX® Recycling System**

The Yellow Bellied Sump Sucker is **fast!** In a typical example, a cylindrical grinder sump with 120 U.S. gallons (454 liters) of coolant and 700 pounds (318 kilograms) of sludge was completely cleaned, the coolant filtered, and returned to the sump in ten minutes.

As a **Premier** Master Chemical distributor in upstate New York, H&C Tool Supply can provide the best pricing, delivery times and access to Master Chemical's complete line of products. With customers from Albany, Watertown, Utica, Syracuse, Rochester, Batavia, Jamestown, Buffalo and all points in between. We even have an on-site lab with a specialist to test your samples and keep your employees, products and equipment safe.

*“Let H&C Tool Supply help you cut a new path to productivity and profitability!”*
